

AI-Powered VET Course Management

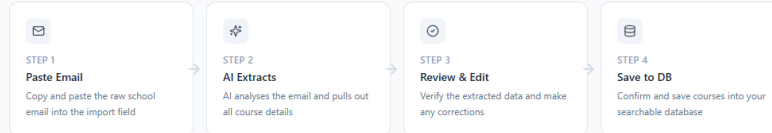

From School Email to Structured Database

Stop manually entering course data from emails. Paste the email, let AI do the extraction, review the results, and save — in under a minute.

Import an Email → Browse Course Database

How it works

Four simple steps from inbox to database.

Features

Everything you need to manage VET course data efficiently.

- Smart Email Import**
 Paste raw school emails and let AI automatically extract structured course data — course name, AQF level, fees, intakes, and more.
- AI-Powered Extraction**
 Powered by advanced LLM technology to parse unstructured email text into clean, structured records with high accuracy.
- Human-in-the-Loop Review**
 Review and edit every extracted field side-by-side with the original email before committing to the database.
- Powerful Filtering**
 Search and filter courses by state, AQF level, category, funding year, English requirements, VET loan, intake month, and gap fees.
- Verification Workflow**
 Mark records as verified after review. Quickly distinguish between confirmed and unconfirmed course data at a glance.
- Per-User Data Isolation**
 Each team member only sees their own records, keeping data clean and organised across your organisation.

Data Fields Extracted

- Course Name
- Provider Name
- AQF Level
- Course Category
- State
- Funding Type
- Funding Year
- Funding Available
